FOR IMMEDIATE RELEASE

LG Singapore Organic Net Zero Carbon Pte Ltd Showcases Sustainable Waste Management Solutions at IFAT Munich 2026

May 7th, 2026 Munich, Germany – LG Singapore Organic Net Zero Carbon successfully participated in IFAT Munich 2026, the world’s leading trade fair for environmental technologies, reinforcing its commitment to advancing sustainable and circular economy solutions for global markets.

During the exhibition, the company engaged with industry leaders, government agencies, technology partners, and environmental solution providers from around the world. LG Singapore Organic Net Zero Carbon received strong expressions of interest from organisations across North America, Europe, and Asia, reflecting growing international demand for innovative and sustainable waste management technologies.

The discussions covered a wide range of applications, including biogas production systems, waste-to-fertiliser technologies, organic waste recovery, and advanced sludge management solutions. The company’s integrated approach to resource recovery and carbon reduction attracted significant attention from municipalities, agricultural operators, industrial waste processors, and environmental infrastructure developers seeking scalable and commercially viable sustainability solutions.

“We are encouraged by the strong global interest generated during IFAT Munich 2026,” said Datuk YS Goh, LG Singapore’s Chairman and CEO. “The event provided an important platform for us to showcase our technologies, exchange knowledge with international stakeholders, and explore partnerships that support the transition towards a circular and low-carbon economy.”

IFAT Munich 2026 brought together more than 3,400 exhibitors and 142,000 visitors from across the environmental technology sector, focusing on innovations in water management, recycling, circularity, and climate resilience. The participation of LG Singapore Organic Net Zero Carbon further strengthens Singapore’s growing role in delivering sustainable environmental solutions to international markets.

The company will continue discussions with potential partners and clients following the exhibition as it expands its global footprint and develops new collaborations in sustainable waste and resource management.
